PRESENTATION: Cap 40 mg x 3 x 10's.
DESCRIPTION: Each capsule contains metoclopramide resinate 40 mg.
ACTIONS: Pharmacology: Metoclopramide has a specific action on the behaviour of digestive system, namely on nausea and vomiting, on oesophageal and gastric peristalsis, and tends to speed gastric-emptying. It also has a central and antiemetic action. The proposed mechanism of action is through inhibition of dopamine receptors in the brain and in the gut. Studies involving duodenal ulcer patients showed a significant improvement in symptoms after 2 weeks. Three times daily intake is brought down to only once-daily intake. A study of bioavailability has shown the prolonged effect.
INDICATIONS: Promotes oesophageal and gastric peristalsis, and tends to speed gastric-emptying. It also has a central and antiemetic action. It is also used for delayed gastric emptying syndrome (e.g., following head injury, stroke, etc.).
DOSAGE & ADMINISTRATION: 1 cap every 24 hrs.
OVERDOSAGE: Treatment: The stomach should be emptied by aspiration and lavage. Extrapyramidal reactions may be controlled by an antiparkinsonism agent e.g., benzhexol or benzotropine.
PRECAUTIONS: The extrapyramidal effects of phenothiazines may be affected by metoclopramide. The absorption of other drugs may be affected. Anticholinergic agents e.g., atropine diminish the action of metoclopramide.
SIDE EFFECTS: The incidence of side effects is very low. Those most reported are drowsiness or lassitude, bowel disturbance, dizziness and extrapyramidal reactions.
STORAGE: Store below 30·C. Keep away from heat, moisture and light.
